

DOF.SH-01

Short Pedestal

Short pedestals are a specialized system designed for low heights, supporting elevations as low as 2 cm.

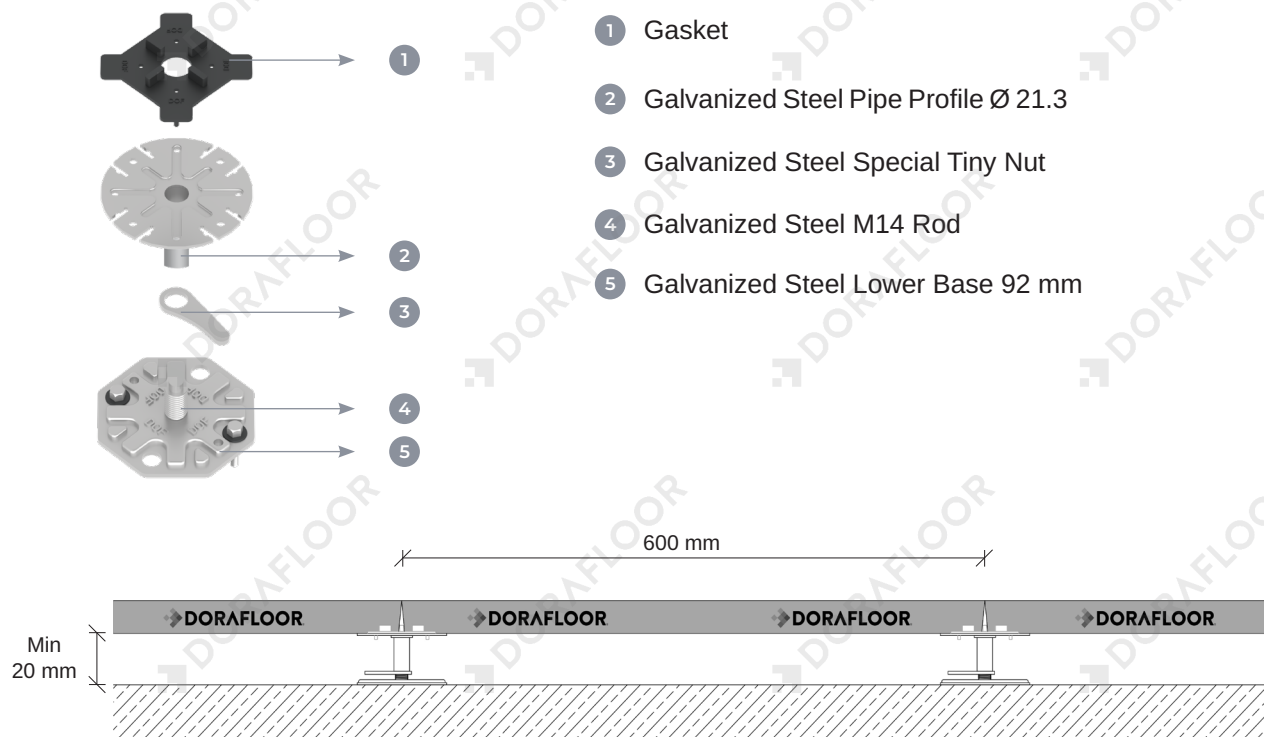

DOF-SH-01

It allows the application of raised flooring on floors with low height. Floor finishing height $5\text{cm} < h < 10\text{cm}$.

Short Pedestal is an innovative raised flooring support system with an adjustable height range of only 2 to 10 cm, designed to solve challenges in low elevation applications. In areas where traditional systems cannot be applied—such as spaces with sensitive height levels or existing buildings—it creates a minimal separation from the ground, allowing for ventilation, water drainage, and cable routing.

Despite its compact size, it offers high load-bearing capacity, making it an ideal solution for both modern architectural projects and renovation works. Its small structure ensures perfect stability and durability, even in installations positioned extremely close to the ground.

Short & Standart Pedestals
