

Special Panels

Special panels are designed to bring aesthetic value and material diversity to raised flooring systems while maintaining durability and precision. Each material option offers unique visual and functional advantages tailored to different architectural needs.

Natural Stone Panels deliver timeless elegance and strength. Made from high-quality marble, granite, or travertine, they provide a luxurious appearance and high load capacity — ideal for prestigious office spaces, lobbies, and executive areas.

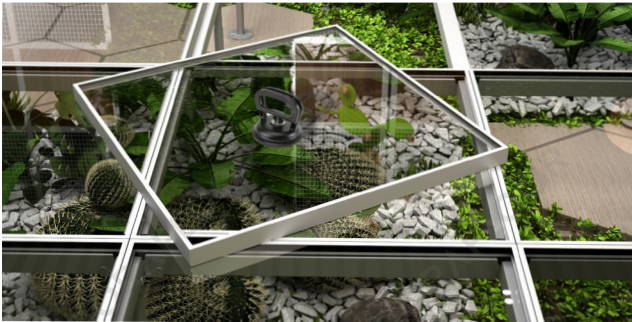

Glass Panels introduce transparency and light to interior spaces. Available in clear, frosted, or colored finishes, they enhance modern aesthetics and can be combined with integrated lighting systems to create striking visual effects.

Wood Laminate Panels offer the warmth and texture of natural wood with enhanced resistance to wear and impact. Their rich tones and patterns bring a sense of comfort and sophistication to workplaces, meeting rooms, and living environments.
